

SKF TFL 522

Double-lip seal

These seals provide low friction, effective sealing against many contaminants, and accommodate axial displacement of the shaft. In highly contaminated environments, they can serve as the first barrier in a three-barrier sealing solution. The combination of housing seals, the grease fill in the housing, and a bearing with integral seals can have a significant impact on bearing service life.

Technical specifications

Dimensions	
Shaft diameter	100 mm
Housing groove diameter	125 mm
Width	9.4 mm

Properties	
Accessory type	Housing seal
Sealing type	Double-lip
Material	Nitrile rubber

Logistics	
Product net weight	0.036 kg
eClass code	23-05-17-90
UNSPSC code	31171519
