

SKF PHG XPB2800EP

Cogged raw-edge wedge belt

Belts provide a very efficient and cost-effective method for transmitting power from prime movers to driven machines. These raw-edge wedge belts have cogs on their inside that enable the belts to flex around smaller pulleys. Without fabric covering their flanks, raw-edge belts can provide a higher friction and a minimized loss of power through slippage. The EPDM synthetic rubber cushion can significantly increase the life of belt drives when operating at high ambient temperatures.

Technical specifications

Dimensions	
Height	13 mm
Pitch length	2800 mm
Width, top	16.3 mm
Properties	
Cogged	Yes
Material	EPDM rubber (ethylene propylene diene monomer)
Section	XPB
Tensile cord	Polyester
Wrapped Cover	No
Logistics	
Product net weight	0.443 kg
eClass code	23-17-02-90
UNSPSC code	26111504
