SKF PHG XPZ762

Cogged raw-edge wedge belt

Belts provide a very efficient and cost-effective method for transmitting power from prime movers to driven machines. These raw-edge wedge belts have cogs on their inside that enable the belts to flex around smaller pulleys. Without fabric covering their flanks, raw-edge belts can provide a higher friction and a minimized loss of power through slippage. The EPDM synthetic rubber cushion can significantly increase the life of belt drives when operating at high ambient temperatures.

Technical specifications

Dimensions	
Height	8 mm
Pitch length	762 mm
Width, top	9.7 mm

Properties	
Cogged	Yes
Material	EPDM rubber (ethylene propylene diene monomer)
Section	XPZ
Tensile cord	Polyester
Wrapped Cover	No

Logistics	
Product net weight	0.0479 kg
eClass code	23-17-02-90
UNSPSC code	26111504
