

## SKF PHS 08B-1A15

Simplex sprocket plate with pilot bore, European standards (EN)

Sprockets are available in many sizes, to fit a variety of design solutions. These simplex sprockets have a pilot bore. With a comprehensive range, you can easily find the correct sprocket size for your application. As standard, all sprockets are made from high-quality steels and have a black oxide coating, and sizes up to and including 25 tooth have hardened teeth.

### Technical specifications

| Dimensions     |          |
|----------------|----------|
| Pitch          | 12.7 mm  |
| Pitch diameter | 61.09 mm |
| Bore min       | 10 mm    |

| Properties           |                              |
|----------------------|------------------------------|
| Category             | Metric roller chain sprocket |
| Performance type     | Simplex                      |
| Sprocket type        | A                            |
| Standard             | BS                           |
| Mounting arrangement | Rough stock bore             |
| Material             | Steel                        |
| Number of teeth      | 15                           |

| Logistics          |             |
