## Cogged raw-edge wedge belt

Belts provide a very efficient and cost-effective method for transmitting power from prime movers to driven machines. These raw-edge wedge belts have cogs on their inside that enable the belts to flex around smaller pulleys. Without fabric covering their flanks, raw-edge belts can provide a higher friction and a minimized loss of power through slippage. The EPDM synthetic rubber cushion can significantly increase the life of belt drives when operating at high ambient temperatures.

## Technical specifications

| Dimensions   |         |
|--------------|---------|
| Height       | 13 mm   |
| Pitch length | 2530 mm |
| Width, top   | 16.3 mm |

| Properties    |                                                 |
|---------------|-------------------------------------------------|
| Cogged        | Yes                                             |
| Material      | EPDM rubber (ethylene propylene diene monomer ) |
| Section       | XPB                                             |
| Tensile cord  | Polyester                                       |
| Wrapped Cover | No                                              |

| Logistics          |             |
|--------------------|-------------|
| Product net weight | 0.4 kg      |
| eClass code        | 23-17-02-90 |
| UNSPSC code        | 26111504    |
