

SKF PHE 1080TGRSB

Tapered grid coupling hub

In high output (kW) and high torque applications where limited space is available, and vibration, shock loads and misalignment occur, SKF Grid Couplings are an excellent choice. The unique design of the grid and hub teeth enable these couplings to accommodate movement and stresses from all three planes. The design also makes realignment virtually unnecessary and further reduces downtime and maintenance costs.

Technical specifications

Dimensions	
Bore diameter max	79 mm
Bore diameter min	27 mm
Diameter	104.8 mm
Length	88.9 mm

Properties	
Category	Grid couplings
Component	Hub
Size	1080

Logistics	
Product net weight	6.88 kg
eClass code	23-03-10-90
UNSPSC code	31171537
