Ribbed belt

Belts provide a very efficient and cost-effective method for transmitting power from prime movers to driven machines. Ribbed belts have a number of lengthwise V-shaped ribs on the inside of the belt. The ribs provide a larger contact area than classical V-belts of similar length and widths, therefore enabling ribbed belts to transmit more power. The pre-tensioned cords provide low stretch during operation.

Technical specifications

Dimensions	
Angle of rib	40 °
Height	3.5 mm
Pitch between ribs	2.34 mm
Pitch length	1190 mm
Properties	
Number of ribs	16
Section	PJ
Logistics	
Product net weight	0.19 kg
eClass code	23-17-02-90
UNSPSC code	26111504
