

SKF PHE 1110TGHCOVER

Tapered grid coupling horizontal split cover

In high output (kW) and high torque applications where limited space is available, and vibration, shock loads and misalignment occur, SKF grid couplings are an excellent choice. They are available with a horizontal or vertical split cover, and the unique design enable these couplings to accommodate movement and stresses from all three planes. The design also makes realignment virtually unnecessary and further reduces downtime and maintenance costs.

Technical specifications

Dimensions	
Diameter	270 mm
Length	161.5 mm

Properties	
Category	Grid couplings
Component	Horizontal Cover
Size	1110

Logistics	
Product net weight	5.07 kg
eClass code	23-03-10-90
UNSPSC code	31171537
