

# SKF PHG XPB2900EP

## Cogged raw-edge wedge belt

Belts provide a very efficient and cost-effective method for transmitting power from prime movers to driven machines. These raw-edge wedge belts have cogs on their inside that enable the belts to flex around smaller pulleys. Without fabric covering their flanks, raw-edge belts can provide a higher friction and a minimized loss of power through slippage. The EPDM synthetic rubber cushion can significantly increase the life of belt drives when operating at high ambient temperatures.

## Technical specifications

Dimensions	
Height	13 mm
Pitch length	2900 mm
Width, top	16.3 mm

  

Properties	
Cogged	Yes
Material	EPDM rubber (ethylene propylene diene monomer )
Section	XPB
Tensile cord	Polyester
Wrapped Cover	No

  

Logistics	
Product net weight	0.429 kg
eClass code	23-17-02-90
UNSPSC code	26111504
