

SKF PHG XPZ925

Cogged raw-edge wedge belt

Belts provide a very efficient and cost-effective method for transmitting power from prime movers to driven machines. These raw-edge wedge belts have cogs on their inside that enable the belts to flex around smaller pulleys. Without fabric covering their flanks, raw-edge belts can provide a higher friction and a minimized loss of power through slippage. The EPDM synthetic rubber cushion can significantly increase the life of belt drives when operating at high ambient temperatures.

Technical specifications

| Dimensions | |
|--------------|--------|
| Height | 8 mm |
| Pitch length | 925 mm |
| Width, top | 9.7 mm |

| Properties | |
|---------------|---|
| Cogged | Yes |
| Material | EPDM rubber (ethylene propylene diene monomer) |
| Section | XPZ |
| Tensile cord | Polyester |
| Wrapped Cover | No |

| Logistics | |
|--------------------|-------------|
| Product net weight | 0.0581 kg |
| eClass code | 23-17-02-90 |
| UNSPSC code | 26111504 |
