## Cogged raw-edge narrow wedge belt

Belts provide a very efficient and cost-effective method for transmitting power from prime movers to driven machines. These raw-edge narrow wedge belts have cogs on their inside that enable the belts to flex around smaller pulleys. Without fabric covering their flanks, raw-edge belts can provide a higher friction and a minimized loss of power through slippage. The EPDM synthetic rubber cushion can significantly increase the life of belt drives when operating at high ambient temperatures.

## Technical specifications

| Dimensions         |                                                 |
|--------------------|-------------------------------------------------|
| Height             | 13 mm                                           |
| Pitch length       | 5080 mm                                         |
| Width, top         | 16.3 mm                                         |
| Properties         |                                                 |
| Cogged             | Yes                                             |
| Material           | EPDM rubber (ethylene propylene diene monomer ) |
| Section            | 5V                                              |
| Tensile cord       | Polyester                                       |
| Wrapped Cover      | No                                              |
| Logistics          |                                                 |
| Product net weight | 0.804 kg                                        |
| eClass code        | 23-17-02-90                                     |
| UNSPSC code        | 26111504                                        |
