

SKF PHE 1110TGRSB

Tapered grid coupling hub

In high output (kW) and high torque applications where limited space is available, and vibration, shock loads and misalignment occur, SKF Grid Couplings are an excellent choice. The unique design of the grid and hub teeth enable these couplings to accommodate movement and stresses from all three planes. The design also makes realignment virtually unnecessary and further reduces downtime and maintenance costs.

Technical specifications

Dimensions	
Bore diameter max	117 mm
Bore diameter min	41 mm
Diameter	160.3 mm
Length	127 mm

Properties	
Category	Grid couplings
Component	Hub
Size	1110

Logistics	
Product net weight	21.6 kg
eClass code	23-03-10-90
UNSPSC code	31171537
